Remote QA / API / Mobile / Product Quality - ATS-friendly resume

Middle+ QA Engineer | API / Backend / Mobile Testing | Fintech & AI Product Experience

PROFILE

Middle+ QA Engineer with fintech and banking QA experience, strong manual testing background, API/backend testing practice, mobile testing experience and solid SQL/PostgreSQL skills. Experienced in testing internal banking services, client-data workflows, financial operation scenarios, release checks and product-quality processes.

I combine structured QA thinking with product ownership: test documentation, risk analysis, regression coverage, defect investigation, API checks, SQL-based data validation and clear communication with development/product teams. I am currently expanding my expertise into AI product testing, automation basics and mobile/app development fundamentals.

Target: full remote international QA role, B1-friendly environment, official employment, relocation-friendly company.

CORE SKILLS

Manual Testing, Functional Testing, Regression Testing, Smoke Testing, API Testing, Backend Testing Basics, Mobile Testing, Test Design, Test Cases, Checklists, Bug Reports, Defect Analysis, Release Testing, SQL, PostgreSQL, Postman, Charles Proxy, DBeaver, Jira, TestIT, Mantis, DevTools, Swagger, AI Product Testing Basics.

EXPERIENCE

QA Engineer / Banking & Fintech QA

2024 — Present

- Tested banking and fintech product scenarios, including internal services, client-data workflows, financial-operation logic and release-critical user flows.
- Performed API testing with Postman: request/response validation, status-code checks, negative scenarios, data consistency and integration-level checks.
- Used SQL/PostgreSQL and DBeaver for test-data validation, database checks and investigation of inconsistencies between UI/API/backend behavior.
- Created and maintained test cases, checklists, bug reports and QA documentation for functional, regression, smoke and release testing.
- Investigated defects, clarified expected behavior with product/development teams and verified fixes before release.
- Participated in regression and release quality checks, focusing on business-critical flows, financial accuracy and user-impact risks.

- Worked with Jira, TestIT, Mantis, Postman, DBeaver, Charles Proxy, DevTools and Swagger.

Banking / Product Support & QA-related Experience

2023 — 2024

- Worked with banking products, client scenarios and financial-operation logic, gaining strong domain understanding useful for fintech QA.
- Analyzed user issues, reproduced product behavior, checked operation scenarios and helped identify inconsistencies in product workflows.
- Developed attention to detail, business-process thinking and communication skills required for high-quality QA work.

PROJECT EXPERIENCE

AI Image Generation Product / CareerMove AI / Product QA & AI Product Testing

2025 — Present

- Participated in testing AI-powered product workflows: user profile, image upload, style selection, generation flow, history, downloads, payments/token logic and admin/user scenarios.
- Tested product behavior from the user perspective and helped improve UX, stability and business logic.
- Worked with realistic product scenarios, edge cases, regression checks and release-readiness validation.
- Gained hands-on exposure to AI product testing, prompt-driven workflows and quality risks specific to AI-based applications.

SELECTED STRENGTHS

- Strong fintech/banking domain awareness.
- Confident API/manual QA background.
- SQL/PostgreSQL-based validation.
- Clear bug reporting and defect investigation.
- Product-minded testing approach.
- Remote-ready communication and fast learning.
